C Programming - Using Pointers, Constants and Strings

Score

85%

C is a powerful system programming language and is commonly used to programme operating systems such as Unix. One of the main advantages of programming in C is that it allows the programmer to write directly to memory. This means that key constructs such as pointers, constants and strings can be used within the memory in an efficient and machine-independent fashion.   This free online computer programming course covers topics such as using pointers for direct memory access and manipulation in C,...
